1 Astrolabe: A robust and scalable technology for distributed system monitoring, management, and data mining

Robbert Van Renesse, Kenneth P. Birman, Werner Vogels

May 2003 **ACM Transactions on Computer Systems (TOCS)**, Volume 21 Issue 2

Full text available: pdf(341.62 KB) Additional Information: full citation, abstract, references, citings, index terms

Scalable management and self-organizational capabilities are emerging as central requirements for a generation of large-scale, highly dynamic, distributed applications. We have developed an entirely new distributed information management system called Astrolabe. Astrolabe collects large-scale system state, permitting rapid updates and providing on-the-fly attribute aggregation. This latter capability permits an application to locate a resource, and also offers a scalable way to track sys ...

2 A self-configuring and self-administering name system with dynamic address assignment

February 2002 **ACM Transactions on Internet Technology (TOIT)**, Volume 2 Issue 1

Full text available: pdf(908.57 KB) Additional Information: full citation, abstract, references, index terms, review

In this article we present a distributed system that stores name-to-address bindings and provides name resolution to a network of computers. This name system consists of a network of name services that are individually self-configuring and self-administering. The name service consists of an agent program that works in conjunction with the current implementation of the Domain Name System (DNS) program. The DNS agent program automatically configures the Berkeley Internet Name Domain (BIND) process ...

3 Design and evaluation of a wide-area event notification service

August 2001 **ACM Transactions on Computer Systems (TOCS)**, Volume 19 Issue 3

Full text available: pdf(1.08 MB) Additional Information: full citation, abstract, references, citings, index terms, review

The components of a loosely coupled system are typically designed to operate by generating and responding to asynchronous events. An event notification service is an application-independent infrastructure that supports the construction of event-based systems, whereby generators of events publish event notifications to the infrastructure and consumers of events subscribe with the infrastructure to receive relevant notifications. The two primary services that should be provid ...

Keywords: content-based addressing and routing, event notification, publish/subscribe

4 Supporting mobility in publish/subscribe middleware: The design of a configurable, extensible and dynamic notification service

Roberto S. Silva Filho, Cleidson R. B. de Souza, David F. Redmiles

June 2003 **Proceedings of the 2nd international workshop on Distributed event-based systems**

Full text available: pdf(118.25 KB) Additional Information: full citation, abstract, references, index terms

Publish/subscribe infrastructures, specifically notification servers, are used in a large spectrum of distributed applications as their basic communication and integration infrastructure. With their recent popularization, notification servers are being developed to support specific application domains. At the same time, general-purpose notification servers provide a large set of functionality for a broad set of applications. With so many options, developers face the dilemma of choosing between a ...

Keywords: dynamic architecture, event-based middleware, notification servers, pluggable architecture

5 Special issue: AI in engineering

D. Sriram, R. Joobbani

January 1985 **ACM SIGART Bulletin**, Issue 91

Full text available: pdf(8.79 MB) Additional Information: full citation, abstract

The papers in this special issue were compiled from responses to the announcement in the July 1984 issue of the SIGART newsletter and notices posted over the ARPAnet. The interest being shown in this area is reflected in the sixty papers received from over six countries. About half the papers were received over the computer network.

6 Industrial sessions: database applications: dbSwitch™: towards a database utility

Shaul Dar, Gil Hecht, Eden Shochat

June 2004 **Proceedings of the 2004 ACM SIGMOD international conference on Management of data**

Full text available: pdf(130.85 KB) Additional Information: full citation, abstract, references

Savantis Systems' dbSwitch™ is an innovative commercial product providing database server virtualization and advancing a database utility model. The dbSwitch enables a new architecture, called a Database Area Network (DAN), which pools database server resources and shares them among multiple database applications. Specific benefits of the DAN architecture for enterprise data centers include server consolidation, improved utilization, high availability and capacity management. We describe t ...

7 A model of BGP routing for network engineering
Nick Feamster, Jared Winick, Jennifer Rexford
June 2004 **ACM SIGMETRICS Performance Evaluation Review , Proceedings of the joint international conference on Measurement and modeling of computer systems**, Volume 32 Issue 1

Full text available: pdf(201.10 KB) Additional Information: full citation, abstract, references, citings, index terms

The performance of IP networks depends on a wide variety of dynamic conditions. Traffic shifts, equipment failures, planned maintenance, and topology changes in other parts of the Internet can all degrade performance. To maintain good performance, network operators must continually reconfigure the routing protocols. Operators configure BGP to control how traffic flows to neighboring Autonomous Systems (ASes), as well as how traffic traverses their networks. However, because BGP route selection i ...

8 From service configuration through performance monitoring to fault detection: implementing an integrated and automated network maintenance platform for enhancing wide area transaction access services
Symeon Papavassiliou, Mike Pace
September 2000 **International Journal of Network Management**, Volume 10 Issue 5

Full text available: pdf(961.05 KB) Additional Information: full citation, abstract, references, index terms

The design and implementation of integrated and automated network–service management platforms that can seamlessly configure services, monitor service–network performance, and detect network faults are of great importance and interest to the service and network providers. In this paper we describe a set of integrated Operations Support Systems (OSS) that implement proactive network maintenance process in Wide Area Transaction Access Services. 9 Data scalability in open hypermedia systems
Kenneth M. Anderson
February 1999 **Proceedings of the tenth ACM Conference on Hypertext and hypermedia : returning to our diverse roots: returning to our diverse roots**

Full text available: pdf(1.42 MB) Additional Information: full citation, references, citings, index terms

Keywords: Chimera, open hypermedia systems, scalability

10 Location management methods of migratory data resources in ATM networks
Takahiro Hara, Kaname Harumoto, Masahiko Tsukamoto, Shojiro Nishio
April 1997 **Proceedings of the 1997 ACM symposium on Applied computing**

Full text available: pdf(785.55 KB) Additional Information: full citation, references, citings, index terms

Keywords: ATM, location management, resource migration

11 Dynamic network reconfiguration support for mobile computers
Jon Inouye, Jim Binkley, Jonathan Walpole

September 1997 **Proceedings of the 3rd annual ACM/IEEE international conference on Mobile computing and networking**

Full text available: pdf(1.60 MB) Additional Information: full citation, references, citings, index terms

12 A scalable and highly available system for serving dynamic data at frequently accessed web sites

Jim Challenger, Paul Dantzig, Arun Iyengar

November 1998 **Proceedings of the 1998 ACM/IEEE conference on Supercomputing (CDROM)**

Full text available: pdf(195.17 KB) Additional Information: full citation, abstract, references, citings

This paper describes the system and key techniques used for achieving performance and high availability at the official Web site for the 1998 Olympic Winter Games which was one of the most popular Web sites for the duration of the Olympic Games. The Web site utilized thirteen SP2 systems scattered around the globe containing a total of 143 processors. A key feature of the Web site was that the data being presented to clients was constantly changing. Whenever new results were entered into the sys ...

13 Distributed file systems: concepts and examples

Eliezer Levy, Abraham Silberschatz

December 1990 **ACM Computing Surveys (CSUR)**, Volume 22 Issue 4

Full text available: pdf(5.33 MB) Additional Information: full citation, abstract, references, citings, index terms, review

The purpose of a distributed file system (DFS) is to allow users of physically distributed computers to share data and storage resources by using a common file system. A typical configuration for a DFS is a collection of workstations and mainframes connected by a local area network (LAN). A DFS is implemented as part of the operating system of each of the connected computers. This paper establishes a viewpoint that emphasizes the dispersed structure and decentralization of both data and con ...

14 A framework for event-based software integration

Daniel J. Barrett, Lori A. Clarke, Peri L. Tarr, Alexander E. Wise

October 1996 **ACM Transactions on Software Engineering and Methodology (TOSEM)**, Volume 5 Issue 4

Full text available: pdf(413.46 KB) Additional Information: full citation, abstract, references, citings, index terms, review

Although event-based software integration is one of the most prevalent approaches to loose integration, no consistent model for describing it exists. As a result, there is no uniform way to discuss event-based integration, compare approaches and implementations, specify new event-based approaches, or match user requirements with the capabilities of event-based integration systems. We attempt to address these shortcomings by specifying a generic framework for event-based integration< ...

15 Monitoring data streams: Adaptive filters for continuous queries over distributed data streams

Chris Olston, Jing Jiang, Jennifer Widom

June 2003 **Proceedings of the 2003 ACM SIGMOD international conference on Management of data**

Additional Information: full citation, abstract, references, citings, index

Full text available: pdf(244.11 KB) terms

We consider an environment where distributed data sources continuously stream updates to a centralized processor that monitors continuous queries over the distributed data. Significant communication overhead is incurred in the presence of rapid update streams, and we propose a new technique for reducing the overhead. Users register continuous queries with precision requirements at the central stream processor, which installs filters at remote data sources. The filters adapt to changing condition ...

16 The Starfire SMP interconnect

Alan Charlesworth, Nicholas Aneshansley, Mark Haakmeester, Dan Drogichen, Gary Gilbert, Ricki Williams, Andrew Phelps

November 1997 **Proceedings of the 1997 ACM/IEEE conference on Supercomputing (CDROM)**

Full text available: pdf(273.52 KB) Additional Information: full citation, abstract, references, citings

The Starfire interconnect extends the envelope of Unix symmetric multiprocessor (SMP) systems in several dimensions. **Interconnect:** an active centerplane with four address routers and a 16x16 data crossbar provides 64 UltraSPARC processors with uniform memory access at a bandwidth of 10,667 MBps. **Flexibility:** Starfire can be dynamically reconfigured into multiple hardware-protected operating system domains. **Robustness:** Failing boards can be hot swapped without interrupting sy ...

Keywords: SMP, UMA, bandwidth, domains, interconnect, latency, partitions

17 Session summaries from the 17th symposium on operating systems principle (SOSP'99)

Jay Lepreau, Eric Eide

April 2000 **ACM SIGOPS Operating Systems Review**, Volume 34 Issue 2

Full text available: pdf(3.15 MB) Additional Information: full citation, index terms

18 Fast detection of communication patterns in distributed executions

Thomas Kunz, Michiel F. H. Seuren

November 1997 **Proceedings of the 1997 conference of the Centre for Advanced Studies on Collaborative research**

Full text available: pdf(4.21 MB) Additional Information: full citation, abstract, references, index terms

Understanding distributed applications is a tedious and difficult task. Visualizations based on process-time diagrams are often used to obtain a better understanding of the execution of the application. The visualization tool we use is Poet, an event tracer developed at the University of Waterloo. However, these diagrams are often very complex and do not provide the user with the desired overview of the application. In our experience, such tools display repeated occurrences of non-trivial commun ...

19 Achieving scalability and expressiveness in an Internet-scale event notification service

Antonio Carzaniga, David S. Rosenblum, Alexander L. Wolf

July 2000 **Proceedings of the nineteenth annual ACM symposium on Principles of distributed computing**

Full text available: pdf(937.62 KB) Additional Information: full citation, abstract, references, citings, index terms

This paper describes the design of SIENA, an Internet-scale event notification middleware service for distributed event-based applications deployed over wide-area networks. SIENA is responsible for selecting the notifications that are of interest to clients (as expressed in

client subscriptions) and then delivering those notifications to the clients via access points. The key design challenge for SIENA is m ...

20 Scalable Networked Information Processing Environment (SNIPE)

Graham E Fagg, Keith Moore, Jack J Dongarra, Al Geist

November 1997 **Proceedings of the 1997 ACM/IEEE conference on Supercomputing (CDROM)**

Full text available: pdf(77.42 KB) Additional Information: full citation, abstract, references, citings

SNIPE is a metacomputing system that aims to provide a reliable, secure, fault-tolerant environment for long-term distributed computing applications and data stores across the global InterNet. This system combines global naming and replication of both processing and data to support large scale information processing applications leading to better availablity and reliability than currently available with typical cluster computing and/or distributed computer environments.

Keywords: MetaComputing, RCDS, SNIPE, reliable, scalable, secure
